Experience

Zeroteq Software Pvt Ltd - Remote

Feb 2026 – Present

Frontend Developer

- Took full ownership of the API and AI Gateway frontend, designed the architecture, built it with Next.js and React, and integrated it with a Go backend before shipping to production.
- Identified performance bottlenecks across gateway and portal interfaces, fixed them, and cut load times significantly while reducing drop-off on key user flows.

InnovQuant Solution Pvt Ltd - Remote

April 2025 – Feb 2026

Frontend Developer

- Built enterprise React dashboards including sandbox, environment, and schema views with role-based access control that handled complex permission logic across multiple user types.
- Designed a low-code ESB configuration interface that cut manual setup effort by 45%, removing the need for engineering involvement on every configuration change.
- Built real-time trading dashboards with live execution flows that stayed responsive and accurate under frequent data updates.

Crewnox Innovation Labs - Remote

Nov 2024 – April 2025

Frontend Developer Intern

- Took multiple products from idea to working MVP across different domains, iterated quickly on feedback, and helped teams decide whether to move forward before investing in a full build.

Projects

Tabshit | *Chrome Extension, React, TypeScript, Tailwind*

- Built a Chrome extension that turns every new tab into a personal productivity hub with dynamic workspaces, drag-and-drop organization, and local-first storage so nothing leaves the browser.
- Addressed the daily problem of losing focus switching between tools by keeping everything accessible from a single tab without any external service dependency.

Mosura | *React, Next.js, Tailwind, Three.js, Framer Motion, TypeScript*

Live Project

- Built a SaaS landing page using Next.js with 3D elements via Three.js and scroll-driven animations via Framer Motion that kept visitors engaged long enough to convert.
- Kept load times fast despite the visual complexity by optimizing asset delivery and animation performance across devices.

Sensei | *React, Redux, Tailwind, Node.js, Express, MongoDB*

Live Project

- Built a full-stack platform where students find alumni mentors, request referrals, and get career guidance without hunting across LinkedIn and cold emails.
- Handled everything from MongoDB schema design to Redux state management on the frontend, including content posting and real-time interaction between users.

Technical Skills

Programming: C++, JavaScript, TypeScript

Frontend: React.js, Next.js, Bootstrap, Tailwind CSS, Framer Motion, HTML5, CSS3, Redux

Backend: Node.js, Express, MongoDB, Nest.js, Mongoose, REST API, Swagger, Postman

Professional: Pair Programming, Jira, Git, GitHub, Docker, Linux, Vercel

Education

School of Computer Science & IT, DAVV

2023 – 2025

Master of Computer Applications

Indore, India

School of Computer Science & IT, DAVV

2020 – 2023

Bachelor of Computer Applications

Indore, India
